

BREAK UP THE UNIFIED COMMUNICATION TRAFFIC JAM

The path to Unified Communications (UC) can often be like a series of busy, poorly planned intersections – and that might actually be putting it delicately. Heck, in planning sessions we've heard it described as an "impending train wreck." No matter what the comparison, Diversified can help you avoid potential traffic jams by creating a solution that provides the right communication experience for everyone in your organization.

Our engineers transform business needs and imagination into intelligent UC solutions through our proven process

IT Sales Finance

- 3

1 Design: Involve Everyone

Diversified approaches UC solution design by engaging with everyone in the organization, ensuring all care-about and use cases are properly accounted for.

Wrong Way:

- Poor or no planning at all
- Not considering security issues
- Employee ideas not taken seriously

Right Way:

- Well-defined plan
- Stakeholders involved in the process
- Solution accounts for everyone's needs

With the appropriate design based on Cisco technology, we enable your organization to:

- Securely connect anyone, on any device
- Share video as easily as making a phone call
- Facilitate better team interactions
- Integrate collaboration into your processes

2 Build: Start with a strong foundation

A successful UC build is constructed on a strong network foundation – ensuring voice, video, and messaging technology can do its job. Diversified also provides the expertise and project management to effectively meet timelines and goals.

Wrong Way:

- Solutions don't match user needs
- Network congestion degrades quality
- Complex usability and integration
- Costs spiral out of control

Right Way:

- UC built on a QoS enabled network
- Includes advanced collaboration tools
- Seamless, integrated mobility
- On time, and on-budget

Cisco's Collaboration Solutions and UC Infrastructure creates outcome like these:

- Reduced costs and lower overall TCO
- Minimized collaboration downtime
- A stellar employee experience
- Easier integration of new technologies

3 Manage: Precise management and proactive support

After implementation, Diversified continues to work with you to ensure a fast adoption rate and a powerful, highly available collaboration environment.

The Right Way Leads to Effective Collaboration:

Diversified stays with you, monitoring performance and reliability to ensure success:

- 24/7/365 Remote Monitoring
- Alerting and Ticketing
- Reporting and Content Management

Why Partner with Diversified?

We are a Professional Engineering services Specialist that offers everything from Cisco unified communications to end-to-end voice, video, messaging, and network solutions for enterprises.

We offer on premise, cloud, and hybrid designs

We truly understand the needs of today's digital workplace

We are extensively qualified in design, implementation, and support

Our engineers are highly experienced, especially in verticals with high security standards
